Internet Resources and Security

The proliferation of information - challenges

- Require fast lookup and simple tools and APIs
- Corelation of information
- Datamining
- Time-based events
- Contacts points

BGP Ranking - metrics on providers

- Correlation of a large variety of private/public datasets including IP, prefixes or ASN for suspicious activities.
- **Allow to provide telemetrics about internet providers worldwide**
- Lookup by AS Number
- Lookup by IP Address
- Years of history
- API to query the service automatically

Malware information sharing platform - targeted attacks

- More than 50 trusted partners from all over the world
- More than 60.000 indicators (IPs, domains, file hashes, samples...)
- More than 600 events seen by a large variety of organisations
- Create automatically relations between malware and their attributes, and between different events
- Simple lookup
- Straightforward creation of new events
- API to query the service automatically

Conclusion

- Attackers are often ahead, sharing and communication plays an important role for their success
- If you share threat intel and indicators, you can:
 - Avoid duplicate analysis work and concentrate on the unknown elements of an attack
 - Automate detection in your infrastructure and reduce the incident response time
